# Connecting the Relay to the Galileo

What you will need:

- Grove relay
- Grove universal 4pin cable
- Jump wires
- Intel Galileo
- Ethernet Connection
- SD Card
- Wyliodrin Account

1. Cut the lamp wires and separate the wires inside (the live and the neutral wires)

2. Connect the live wires by inserting them into the relay and securing them with the screws.

3. Connect the neutral wires with a simple conductor.

4. Place the relay in a wiring junction box and close for safety reasons as the wires are exposed.

5. Plug the Lamp into a socket.
